

THE ONLY VET YOU NEED

In our beautiful Norrland you will find our new clinics from Kiruna to Skellefteå. We are a family-owned company that established our first veterinary clinic in Gällivare in 2012. After a few years as an employed veterinarian, our CEO Julia Engqvist had the idea to open her own veterinary clinic in Norrland with modern equipment and veterinarians with specialised fields, which proved to be a very wise decision.

More than ten years later, we have had the great privilege of opening clinics in Boden, Arvidsjaur, Luleå, Skellefteå, Piteå, Kiruna and Jokkmokk. We will also open the doors to a completely new animal clinic in Umeå in 2024.

We have modern equipment and competent and experienced employees in all of our clinics. Among our 65 colleagues are veterinarians with special interests in surgery, the heart, the eyes, and scarring, to name a few.

A SAFE SPACE FOR ALL

We want our patients and their families to know they are in good hands when they come to see us. Our goal is for our patients to have the same care provider at each visit as much as possible. If an emergency arises late at night and your regular veterinarian with us is not available, you are welcome to visit the clinic in Luleå, which is open until 10 p.m. on weekdays. Because our clinics use the same system, we have access to all of our patients' medical records.

Clinic extends a warm
welcome!***

WHAT WE OFFER TO OUR PATIENTS

MEDICAL INVESTIGATION

Animals, like humans, can suffer from diseases such as diabetes, heart failure, and cancer. At Lapland's Veterinary Clinic, we can diagnose your animal through discussion with you as the animal owner, clinical examinations, and any additional tests. When we determine what is wrong, we collaborate with you, the owner, to plan further treatment for the animal. We have the skills and resources to effectively diagnose and treat the majority of medical conditions at all of our veterinary clinics.

SURGERY

Some illnesses and injuries require surgery to be treated. We can perform a wide range of surgical procedures at Lapland's Veterinary Clinic. Throughout the procedure, we monitor patients by taking their blood pressure, checking their heart activity with an EKG, and ensuring that their oxygenation is working properly.

ORTHOPAEDICS

We have veterinarians at our orthopaedic clinic who have advanced their knowledge in the field of orthopaedics, which is a specialty in bone, tendon, and joint diseases. We perform peephole surgery on joints, skeletal and bone surgery, cruciate ligament surgeries, and kneecap surgeries, among other things. We are distinct from other animal clinics in that we can perform more advanced operations

such as replacing or filling diseased bones with 3D printer implants.

DENTAL CARE

Calculus and tooth loss, also known as periodontitis, can affect our pets. We can remove calculus from your pet quickly and efficiently. We can also provide specialised services such as root canals, orthodontics, and various types of oral surgery.

OPHTHALMOLOGY

Maria and Gertrud, our eye specialists, pay regular visits to our clinics in Kiruna, Gällivare, and Skellefteå. They assist us with eye and patella examinations, cardiac certificates, and much more. They both have extensive experience investigating and treating eye diseases in animals of all species.

IMAGING DIAGNOSTICS

Looking at and feeling your animal isn't always enough. On those occasions, we have various imaging diagnostics to get a picture of the inside. X-ray, ultrasound, HCM screening, and computed tomography are just a few of the tools we use to determine what is wrong with the patient.

REHABILITATION

When your animal has had surgery or been in an accident, it will require specially adapted training to return to normal function. The focus of rehabilitation is not only on the injured body part, but also on the healthy parts that need to be strengthened. Aids such as water walkers, laser treatment, vario-

us manual therapies, and strength and balance training are sometimes used when rehabilitating an animal.

LABORATORY

We may need to take samples to get an overall picture of your pet's health in order to get as much information as possible. We are unique in that we have our own laboratory for the analysis of blood samples, urine samples, fur samples, and vaginal smears. This means that in most cases, you can get an answer the same day. In the case of bacterial cultures or resistance testing, we must send the samples away for evaluation.

VÅRA VÄNNER

AN ENJOYABLE WORKPLACE

We are a veterinary clinic that prioritises providing a pleasant working environment for our employees. It is critical that they maintain a healthy balance between work and leisure in order to perform at their best. We enable our colleagues to provide high-quality care to our four-legged patients while still having enough energy for their own leisure activities by switching to a 6-hour workday on certain shifts, rather than the traditional 8-hour structure.

OUR CARE DOESN'T END AT THE CLINIC

When an accident occurs and your pet requires veterinary care, we are here to help! We always have at least one clinic open between 07.00 and 22.00 and are always available digitally.

PROVET Cloud

Utformad av dig.

Skapad av oss.

Designad för framtiden.

Att byta journalsystem känns mycket tryggare när du har rätt team bakom dig.

Flera av Sveriges kliniker och djursjukhus har valt Provet Cloud för att det innehåller all funktionalitet de behöver för att på ett säkert och flexibelt sätt utföra sitt dagliga arbete. Vi har lokal implementations- och supportpersonal med erfarenhet från branschen som ger dig som kund i Provet Cloud stöd i alla steg i processen.
